

Your First Step to IG Success, Built on Trusted Excellence.

Trusted Excellence — We deliver quality products and service.

Trusted Partnerships — We work together with customers, vendors, and employees.

We Do What We Say — Our commitments matter.

We Find a Way — We solve problems.

Passionate Ownership — Everyone owns the results.

THE FULL LINE

Spacer Systems (Commercial & Residential) · Aluminum Coil · Injection Molded Clips · 4th Corner Fasteners · Custom Precut, Prenotched Lineals · Precision Aluminum Extrusions

LEADINGEDGE
Quality Metal Products, Trusted Excellence.

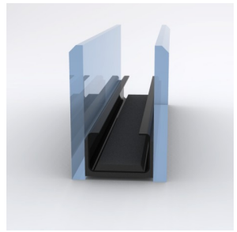

LEADINGEDGE
Quality Metal Products, Trusted Excellence.

Everything but the glass.

One source for what goes into every insulated glass unit, commercial and residential:

- Spacer Systems — Commercial & Residential
- Aluminum Coil
- Injection Molded Clips
- 4th Corner Fasteners
- Custom Precut, Prenotched Lineals
- Precision Aluminum Extrusions

SPACER SYSTEMS

Leading Edge is GED's approved supplier across every warm edge spacer material on the market: stainless steel, tin plate, thin tin plate, and coated aluminum, all prime material, stocked and system matched from a single source.

RESIDENTIAL — INTERCEPT SYSTEMS

Blackline

Our exclusive black plate steel warm edge spacer, patent pending, available in both .0105" Intercept and .0078" Ultra gauge, system matched and guaranteed to run on GED Intercept and Ultra. All prime material, tight manufacturing tolerances, the strongest corners available.

EdgeStar

Stainless steel Intercept spacer, .0078" gauge, impervious to gas transmission, built for the best available strength and gas retention on the market. Meets Energy Star requirements.

ThinStar

Our tin plate alternative to stainless, .0078" gauge, interchangeable with EdgeStar coil. GED's designated approved supplier of ThinStar.

SSB & TSB

Black finish stainless and tin plate options, pairing EdgeStar's and ThinStar's substrates with the Blackline look.

COMMERCIAL

Aluminum Box Spacer

Bendable, perforated aluminum spacer bar for commercial glazing, 24 sizes, filled with desiccant on the line.

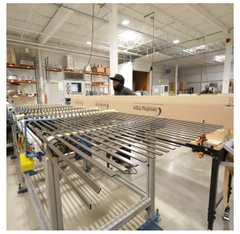

- All prime material — no reclaim, no off spec substrate
- GED approved supplier across every equipment material: stainless steel, tin plate, thin tin plate, and coated aluminum
- Compliant with Energy Star, GED Intercept and Ultra, PPG, HB Fuller, and Kommerling requirements
- Stocked sizes across North America, competitive prices, low minimums
- Multiple spacer materials from one supply source

4TH CORNER FASTENERS

The hardware that closes out the spacer frame. Screws in zinc, silver, and matte black, sized 3mm, 4mm, and 5mm, plus a patent pending capillary screw. OptiClose, our exclusive lower profile closure, gives a 350% larger fill hole and now comes in black to pair with Blackline. Capillary tubes, hard or soft stainless T304, equalize IG pressure on units crossing elevation changes of 2,000 feet or more.

ALUMINUM COIL

Leading Edge was the first approved coil supplier for GED Intergrid and ContourGrid muntin roll forming machinery, supplying coated aluminum coil for Intergrid muntin bar and screen frame applications alike.

A Paint System Built for This Industry

A non fogging polyester paint system, purpose built for window and door applications. High molecular weight resin for flexibility and long lasting color, tested to ASTM standards, passes Canadian fog and UV exposure testing.

Two Tone Striped Coil

White/Black, White/Tan, White/Bronze, and additional two tone combinations, on top of 30+ solid and wood grain finishes.

- First company to introduce two tone and wood grain muntin bar via roll form machinery to the market
- Works with aluminum, vinyl, or wood windows and patio doors
- Reduces labor and nearly eliminates scrap vs. pre-formed muntin
- All prime 3105 aluminum alloy, .014" to .030" plus coating, GED approved material, stocked sizes across North America

INJECTION MOLDED CLIPS

The connector hardware for muntin bar and spacer systems. End pins and cross joiners assemble InterGrid muntin bar at the ends and intersections; screen corners join screen frame; Intercept clips and Super Spacer clips are sized to each spacer system. Manufactured to tight ISO certified tolerances using only virgin, high quality resins, available in colors to match the spacer.

CUSTOM PRECUT, PRENOTCHED LINEALS

Precision roll formed off the same coil program, cut to length and prenotched to your exact specification, standard 138" lengths in stock or two weeks out. Three profile families: 3/16" x 5/8" and 3/16" x 13/16" rectangular, and a 5.5mm x 18mm contour. No notching machine, no yield loss, no equipment investment.
